

Disclaimer

Empiribox is an innovative science teaching support business focused on improving science in primary schools. We want all primary teachers to enjoy teaching science with confidence, so they can inspire children and excite in them a lifelong passion for science and develop a curiosity about the universe in which we live.

Health and safety (H&S) underpin every activity within all our advice, experiments and teaching guidance. All our teaching support resources from physics and biology equipment to chemicals are accompanied by comprehensive H&S documentation that is reviewed by the UK's largest independent health and safety organisation – Peninsula (see <https://www.peninsulagrouplimited.com/about/>)

We carry out full Risk Assessments (RA) on all our Lesson Plans, ensuring the safety of each investigation for use in Primary School classrooms.

Empiribox always encourages the appropriate safety procedures are undertaken when participating in science away from a subscribing Empiribox Primary School, whether this is at home or any other locations not under supervision of a trained and qualified professional.

Empiribox take no responsibility and assume no liability for any injury caused to an individual by an investigation not undertaken within an Empiribox subscribing school and supervised by a qualified professional who has undergone Empiribox H&S training.
